III.—SYSTEMATIC.

The classification of Sharpe's "Hand-list" is here followed as regards orders and families. The genera are arranged alphabetically in the families. This method is a change from the old system, as so many alterations in nomenclature and generic status have been introduced since the publication of the "Hand-list."

Full references are given only in the case of new genera and species. In other cases the numeral in heavy Clarendon refers to the List of Titles, where the full reference will be found. The figures in smaller Clarendon refer to the volume number of the full reference.

LIST OF ABBREVIATIONS WITH TITLES OF PERIODICAL PUBLICATIONS, CONTAINING PAPERS DEALING WITH MATTERS OF ZOOLOGICAL IMPORTANCE.

The last complete list of periodicals was published in 1931 in Vol. 67 of the Record and only supplements were printed in 1932, 1933 and 1934. Last year a new edition of the World List of Periodicals was issued and the present list has been thoroughly revised and brought into agreement with it. In the case of Russian and other Slavonic and extra-European languages the title of the periodical has been given in the French, German or English official translation and not in the original Russian as in the World List. This it is believed will be a convenience to those who consult our list.

It is not intended that the present list shall be a complete one. This is specially the case in regard to medical and agricultural journals. Only those which contain matter of definite zoological interest have been retained.

After the full title of each periodical is a number and one or two capital letters in square brackets. The number corresponds to that given in the new edition of the World List, and where no number is given the periodical is not to be found in the World List. The capital letters indicate the Libraries in which the periodical is to be found. As a rule only two are given, and these refer to libraries in London; but more information on this point is to be obtained by referring to the World List itself, where the scientific libraries of twenty of the larger towns of the British Islands, as well as those of London, have been utilized.

In the present list the periodicals are arranged for the convenience of readers according to the abbreviations, not as in the World List according to the full titles.

The following are the library symbols used in this list:—
